Professional Profile

I'm a First-Class BSc Cyber Security and Forensic Computing graduate from the University of Portsmouth, certified in CompTIA Security+. I have hands-on experience in malware analysis, system hardening, and SOC tooling (Sentinel, Wazuh, Defender for Endpoint), alongside offensive practice through CTFs and a personal Pen testing lab. I'm now preparing for Hack the Box's CPTS certification to build on my offensive background and pursue a graduate role in cybersecurity threat research.

Education

BSc (Hons) Cybersecurity and Forensic Computing - First-Class Honours
University of Portsmouth - Graduated Jun 2025

Focus: SOC operations, incident response, threat modelling, vulnerability management, compliance frameworks, Vulnerability discovery and exploitation for low level applications.

Core Skills

Security Monitoring & Detection:

SIEM: Microsoft Sentinel, Wazuh, Splunk
Defender for Endpoint, IDS/IPS setup, KQL queries, firewall tuning, alert creation
Wireshark, TCP/IP analysis

Incident Response & Vulnerability Management:

Log analysis & parsing (Python automation)
Vulnerability scanning: Nessus, Nmap, Metasploit
Patch management, endpoint protection, system hardening

Secure Coding & Automation:

Python, Bash, C - secure C coding practices to prevent buffer overflow, integer overflow, heap overflow, and format string vulnerabilities

Digital forensic: Autopsy, FTK imager, Hard disk infrastructure

Compliance & Frameworks:

Policy development & risk documentation based on NIST, CIS, NCSC guidance

Cybersecurity Experience

Enterprise SOC Lab (In Progress, 2025):

Designed and deployed SOC environment in AWS using Microsoft Sentinel, Defender for Endpoint, and Active Directory

Built detection rules and KQL queries to monitor simulated enterprise traffic

SOC Lab - Threat Detection & Response:

Simulated insider threats, brute force attacks, and malware infections

Used Wazuh SIEM (manager) and endpoint (agent) logs to detect and respond to incidents, reducing detection time to under 2 minutes in testing

Penetration Testing Home Lab:

Conducted vulnerability assessments and manual exploitation on virtual targets through CTFs and site meant for testing such as DVWA, secure bank etc.

Used Nmap , Burp Suite to perform and document labs based on OWASP top 10 most of which I have documented on my portfolio accompanied with methodologies and payload snippets

System Hardening Project:

Applied OS-level and firewall rules on Linux/Windows environments

Validated changes via traffic and log analysis using Wireshark

Secure Coding & Vulnerability Mitigation Labs:

Implemented secure C coding standards to mitigate buffer overflow, integer overflow, heap overflow, and format string attacks and retested to make sure they took effect.

Log Parsing for Incident Detection:

Created Python scripts to parse and analyse system/application logs, flagging anomalies for SOC investigation

Cyber912 Strategy Challenge - Atlantic Council (Sep 2023 - Feb 2024):

Developed national-scale cyber incident response strategies; presented to industry/government stakeholders including both technical and non-technical individuals - 2nd place,

HackTheBox University CTF (Dec 2024):

Completed privilege escalation, web exploitation, and pwn challenges, contributing to incident replication and detection, finished top 250 globally.

Certifications & Professional Development

CompTIA Security+ (SY0-701) - Obtained 2025

Attendee: Black Hat Europe, Crestcon Active in offensive & defensive security workshops

Maintains a portfolio site with CTF writeups and lab documentation (currently populating as it was just developed)

Clearance eligible for SC
